**(54) Title: PORTABLE VAPOR INHALER**

**(57) Abstract:** The present invention is a portable vapor inhaler (10) for improving the breathing of those suffering from nasal congestion. The invention includes a vapor-concentrating lid (12) and an effervescent composition (14). In further embodiments the invention may include a reservoir. Hot water is placed in the reservoir along with the effervescent composition and the vapor-concentrating lid is placed thereon. The hot water creates a humid vapor in the reservoir and beneath the vapor-concentrating lid. The positive pressure created by the effervescent composition then forces the humid air out through the vapor-concentrating lid and is then inhaled by the user.
